Periscopes

The most commonly used definition of outer space is everything beyond the Kármán line, which is 100 kilometers (62 mi) above the Earth's surface. The United States sometimes defines outer space as everything beyond 50 miles (80 km) in altitude. Rocket engines are the only currently practical means of reaching space. Conventional airplane engines cannot reach space due to the lack of oxygen. Rocket engines expel propellant to provide forward thrust that generates enough delta-v (change in velocity) to reach orbit. For crewed launch systems launch escape systems are frequently fitted to

ABOUT

Gayot New is a contemporary interpretation of Jean-Pierre Gayot's eponymous typeface of the 1970's. The original Gayot was released as dry-transfer lettering in 1973 by Mecanorma as a winner of their International Type-Style Contest. In addition to revised proportions, this new interpretation sees the addition of uppercase characters, extended Latin character support, and new symbols and punctuation.

While Gayot New deviates from its inspiration, it remains the same in tone; sorta futuristic, sorta retro, a little bit ugly, and a whole lot of fun. Use it big, short, and loud. Gayot New is perfect for logos, call-outs, short headlines, and names on the back of football jerseys or budget space travel vessels.

Designed by: Brian Dove
Released: November, 2022
Version: 1.1 (Apr. 20, 2023)
